IDEC

INSTRUCTION SHEET Safety Controller

Safety ne FS1A-C21S

Confirm that the delivered product is what you have ordered. Read this instruction sheet to make sure of correct operation. Make sure that the instruction sheet is kept by the end user.

SAFETY NOTE

In this operation instruction sheet, safety precautions are categorized in order of importance Warning and Caution

MARNING

Warning notices are used to emphasize that improper operation may cause severe personal iniury or death.

Caution notices are used where inattention might cause personal injury or damage to equipment.

· Do not disassemble, repair, or modify SafetyOne. This will cause impairment of the safe operability of SafetyOne

 Turn off the power to SafetyOne before starting installation, removing, wiring, maintenance, or inspection of SafetyOne. This can causes electrical shocks or fire hazard. Before operating SafetyOne, carefully read this instruction sheet and the latest user's manual (FS9Z-B1572), and ensure that the environment conforms to the requirements of SafetyOne

specifications. If SafetyOne is operated in an environment that exceeds the specifications of SafetyOne, it causes impairment of the safe operation of SafetyOne. The installation, wiring, configuration, and operation of SafetyOne must be performed only by "Safety

responsible persons". Safety responsible persons are personal who have requisite qualification authorizing them as being capable of safely carrying out each step including the designing, installation, operation, maintenance, and disposal of SafetyOne. Persons without this technical expertise must not use SafetyOne.

SafetyOne must be subjected to regular proof test verification that each function of SafetyOne is performing up to the required standard.

Installation of SafetyOne must be performed according to the instructions found in this instruction sheet and the user's manual. improper installation may cause the SafetyOne to fail. • Do not use the monitor outputs or solenoid/lamp outputs as safety outputs. When there is a failure in

SafetyOne or peripheral devices, impairment of the safe operation of the system is possible. The start switch has to be placed outside the danger zone and in a safe position from which there is

good visibility for checking that no person is within the danger zone. Do not use the start input and the external device monitor input as a safety input. When there is a

failure in SafetyOne or peripheral devices, impairment of the safe operation of the system is possible. Use the SafetyOne in compliance with laws and regulations of the country in which it is being used. Use safety inputs and safety outputs in circuit configurations conforming to the application according to the usage, and the safety requirements.

Calculate respective safety distances, taking into consideration the response time of the SafetyOne, safety deveises to be connected to the SafetyOne, and each other devices that forms a part of the system configuration.

Applicable safety performance is dependent on each system configuration

Use a power supply that meets following required specifications

-Conforms to the power supply rating of SafetyOne.

-Complies with the SELV/ PELV circuit specified by EN 50178 or EN60950-1. -Has the functionality or the functional equivalent of the control voltage and current of class 2 circuit, as defined in UL508 or UL1310.

-Is in compliance with safety laws and regulations relating to electrical safety, EMC, and like under

the laws and regulations of the country in whidh it is being used. • Ground the V- line (0V DC) for ground fault diagnosis.

In the case of a new configuration or modified configuration, be sure to perform a check for each input and output function.

Implement protective measures that personal, other than safety responsible persons operating

the SafetyOne, are unable to modify the configuration. • Separate SafetyOne from devices and wires which are not according to class 2 circuit requirements.

· SafetyOne is designed for installation within an enclosure. Do not install SafetyOne ontside an

enclosure. Install SafetyOne in enclosure rated IP54 or higher. Install SafetyOne in environments described in the catalog, instruction sheet, and user's manual. If SafetyOne is used in places where the SafetyOne is subjected to high temperature, high humidity, condensation, corrosive gases, excessive vibrations, and escessive shocks then electrical shocks,

fire hazard, or malfunction may result. Environment for using the SafetyOne is "Pollution degree 2". Use SafetyOne in environments of

pollution degree 2 (according to IEC/EN60554-1). Prevent SafetyOne from falling while moving or transporting the SafetyOne, otherwise damage or malfunction of the SafetyOne may result.

· Prevent metal fragments and pieces of wire from dropping inside the SafetyOne housing. ingress of such fragments and chips may cause fire hazard, damage or malfunction.

Install SafetyOne, so that there is adequate distance from the walls, heat generating bodies, and

peripherals, taking into consideration space requirements for maintenance and ventilation Install SafetyOne on 35mm DIN rails with BNL6 mounting clips (sold saparately) on both sides

of SafetyOne.

Wire the connectors with conforming cables or ferrules.

 Ground FE terminal to assure electromagnetic compatibility.
Use common 0V DC, if different power supplies are used for SafetyOne and other devices (ex. safety light curtain)

· Wire the inputs and outputs so that they are separated from power lines.

When overcurrent flows into output terminals, the protective function turns off the output. However, when overcurrent status lasts long, internal protective elements will fuse. To protect the internal

elements, insert fuses of double the rated value to each terminal · Use IEC60127 approved fuses on outside of the power line. (This is required for equipment

incorporating SafetyOne that is destined for Europe.)

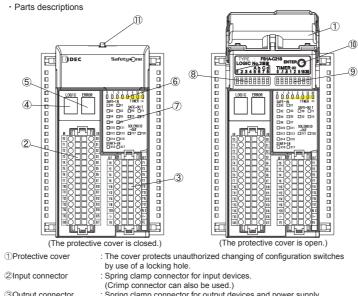

When disposing of SafetyOne, handle it under the laws and regurations of the country in whitch it is diposed

1 Unpacking

· Before installing the FS1A-C21S, make sure that following items are contained completely without damage during transportation

Item	Type Number	Number
Module	FS1A-C21S	1
Connector (input / output)	FS9Z-CN01 / FS9Z-CN02	1 for each
Configuration tool		1
Marking tie	FS9Z-MT01	3
Instruction sheet (English / Japanese)	B-1570 / B-1571	1 for each

 Dimensions 72.0 109.5 113.8

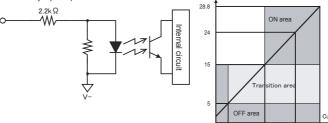

3 Output connector	. Spring clamp connector for output devices and power supply.
	(Crimp connector can also be used.)
④Logic LED	: The 7-segment green LED indicates the number of logic pattern lected.
5 Error LED	: The 7-segment red LED indicates an error in the SafetyOne and peripherals.
©Timer LED	: The eight timer LEDs indicate the selected OFF-delay timer value.
⑦Input /output status LED	: The input LEDs indicate the state of inputs.
	The output LEDs indicate the state of outputs.
SAFE-IN	: Status of safe inputs, e.g. X0···X15
START-IN	: Status of start inputs, e.g. X16, X17
SAFE-OUT	: Status of safe outputs, e.g. Y0…Y3
SOLENOID-OUT	: Status of solenoid / lamp outputs, e.g. Y17, Y20
8Logic switch	: DIP switch for selecting the internal logic.
9 Timer switch	: DIP switch for selecting the OFF-delay time for safe outputs.
10 Enter button	: Button for activation of parameter changes.
1 Lock hole	: Hole for locking the protective cover.

1 Lock hole 3 Product Specifications

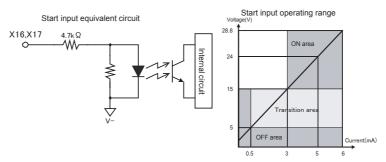

General specifications		
	Operating temperature (Surrounding air temperature)	-10 to +55°C (no freezing)
	Relative operating humidity	10 to 95% (non-condensing)
	Storage temperature	-40 to +70°C (no freezing)
	Relative storage humidity	10 to 95% (non-condensing)
	Pollution degree	2 (IEC/EN60664-1)
	Degree of protection	IP20 (IEC/EN60529)
suo	Corrosion immunity	Atmosphere be free from corrosive gas
Operating conditions	Altitude	Operation : 0 to 2000m (0 to 6565 feet)
		Transportation : 0 to 3000m (0 to 9840 feet)
	Vibration resistance	Vibration : 5 to 8.4Hz amplitude 3.5mm, 8.4 to 150Hz acceleration 9.8m/s ² (1G) 2 hours per each of XYZ axes (IEC/EN60068-2-6) Bump : Acceleration 98m/s ² (10G) 16ms duration 1000 times per each of XYZ axes (IEC/EN60068-2-29)
	Shock resistance	147m/s ² (15G), 11ms duration, 3 times per each of XYZ axes (IEC/EN60068-2-27)
	Connector durability	50 times maximum
	Operation strength of configuration switches	100 operations maximum (per 1 switch)
	Operation strength of enter button	1000 operations maximum
	Enclosure material	Modified-Poly Phenylen Ether (m-PPE)
	Weight	Approx. 330g
	Life time	10 years (at 40 °C of operating temperature)
	Over voltage category	II

	Rated voltage	24V DC
	Allowable voltage range	20.4V DC to 28.8V DC
	Power consumption	48W (at rated voltage, all inputs and outputs are ON, includes output loads)
	Allowable momentary power interruption	10ms minimum (at rated voltage)
		ON to OFF : 40ms maximum Note1 50ms maximum (in case of logic 22b and 22C) Note1
s	Reaction time	100ms maximum Note2 OFF to ON : 100ms maximum Note3
Ē	Start-up time ^{Note4}	6s maximum
condition		Between live part and FE terminal : 500V AC 1minute
N N	Dielectric strength	Between enclosure and FE terminal : 500V AC 1minute
ectrical		Between live part and FE terminal : $10M\Omega$ minimum
ec.	Insulation resistance	(at 500V DC megger)
Ш		Between enclosure and FE terminal : 10MΩ minimum (at 500V DC megger)
	Noice immunity	DC power terminals : 1.0kV 50ns to 1µs
	Noise immunity (Noise simulator)	I/O terminals : 2.0kV 50ns to 1µs (with coupling adapter)
	, ,	
	Inrush current	25A maximum
	Affect of improper	Reverse polarity : No operation, no damage
	power supply connection

2 Dimensions and Parts Descriptions

B-1570(1)

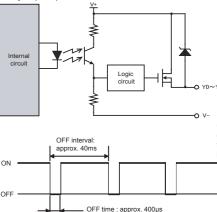

· Safety output specifications

ourory output op comoutone	
Output type	Source output (N channel MOSFET)
Rated output voltage	Power supply voltage
Minimum output voltage	Power supply voltage -2.0V
Number of output terminals	4 (Y0, Y1, Y2, Y3)
Maximum output current	Point : 500mA maximum Total : 1A maximum
Leakage current	0.1mA maximum
Allowable inductive load ^{Note1}	L/R = 25ms
Allowable capacitive load	1µF maximum
Cable length ^{Note2}	100m maximum (total wiring length per 1 output)

Note1 : For protection of output circuits, protection devices such as diodes should be connected to output circuits with inductive loads.

Note2 : For cables longer than 30m between SafetyOne and connected devices, use grounded shielded cables to assure electromagnetic compatibility

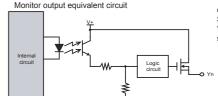

Safety outputs of the SafetyOne are semiconductor outputs. For diagnostics of the shut-off function, the SafetyOne generates off-pulses in certain intervals when the outputs are in ON state. The specifications of the safety outputs change depending on the logic selected See further information in user's manual 'Chapter 5 LOGIC". But the basic specifications are same

Check the response time of the external devices so they do not correspond to the off-pulses. Monitor and solenoid/ lamp outputs do not generate OFF-pulses

Monitor output	specifications

Source output (N channel MOSFET)	
Power supply voltage	
Power supply voltage -2.0V	
11 (Y4, Y5, Y6, Y7, Y10, Y11, Y12, Y13, Y14, Y15, Y16)	
Point : 20mA maximum Total : 220mA maximum	
0.1mA maximum	
100m maximum (total wiring length per 1 output)	

Note1 : For cables longer than 30m between SafetyOne and connected devices, use grounded shielded cables to assure electromagnetic compatibility

The specifications of the monitor outputs change depending on the logic selected. See further information in user's manual "Chapter 5 LOGIC". The basic specifications are the same

🕂 WARNING Do not use monitor outputs for safety related purposes. This may cause a loss of safety functions in case of failure of the SafetyOne or peripherals

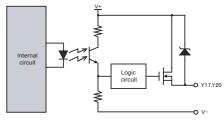

Solenoid/lamp output specifications

Output type	Source output (N channel MOSFET)
Rated output voltage	Power supply voltage
Minimum output voltage	Power supply voltage -2.0V
Number of output terminals	2 (Y17, Y20)
Maximum output current	Point : 500mA maximum Total : 500mA maximum
Leakage current	0.1mA maximum
Allowable inductive load ^{Note1}	L/R = 25ms
Cable length ^{Note2}	100m maximum (total wiring length per 1 output)

Note1 : For protection of output circuits, protection devices such as diodes should be connected to output circuits with inductive loads.

Note2 : For cables longer than 30m between SafetyOne and connected devices, use grounded shielded cables to assure electromagnetic compatibility

Solenoid/lamp output equivalent circuit

The specifications of the solenoid/lamp outputs changes depending on the logic selected. See further information in user's manual "Chapter 5 LOGIC" But the basic specifications are the same

MARNING

Do not use solenoid/lamp outputs for safety related purposes. This may cause a loss of safety functions in case of failure of the SafetyOne or peripherals.

Logic number

Indicators

The logic number of the SafetvOne is composed by a 3-digit code as following.

Example: LOGIC No 204 The first code "2" inidicates the type number "FS1A-C21S".

Following 2-digit code "04" indicates the state of the logic switch. The logic LED displays this 2-digit code. But "0" is not displayed

LOGIC No.2

TYPE : FS1A-C21S

A b C d 1 2 3 4 5 6 7 8 1 2 5 15 30

1 Logic LED

Indication	Status	Descriptions
"1"…"8"	ON	The selected logic is in Run or Protection state. (Ex. : In case of logic 24A $4 \rightarrow A \rightarrow 4 \rightarrow A \rightarrow 4 \rightarrow$)
"A", "b", "C", "d"	Blink	The selected logic is in Configuration state. (Ex. : In case of logic 24A $4 \rightarrow A \rightarrow OFF \rightarrow 4 \rightarrow A \rightarrow OFF \rightarrow 4 \rightarrow A \rightarrow)$
"E"	Blink	The selected logic has Configuration error (The logic is not selected or incorrect multiple switches are selected ^{Noter} .)
Random pattern	ON/Blink	Initializing (Initial state)
Blank	OFF	Error occurs (Stop state)

Note1: Proper logic switch configurations are shown below.

Select one of "1" to "8" switches.

-Select one of "1" to "4" and one of "A", "b", "C", "d" switches. Other than above selections are incorrect.

2 Error I ED

2 Error LED			
Indication	Status	Descriptions	
"1"	ON	Input monitor error (Protection state)	
"2"	ON	Wiring fault at safety inputs or fault in safety input circuits (Stop state)	
"3"	ON	Wiring fault at start inputs or fault in start input circuits (Stop state)	
"4"	ON	Wiring fault at safety outputs or fault in safety output circuits (Stop state)	
"5"	ON	Muting lamp error (disconnection) (Logics with lamp output) (Stop state) (Software version 1.00 only)	
"6"	ON	Power supply error or internal power supply circuit error (Stop state)	
"7"	ON	Internal error, power supply error or internal power supply circuit error (Stop state)	
"9"	ON	EMC disturbance (Stop state)	
"C"	ON	Configuration procedure is in progress (Configutation state)	
	Blink	Configuration is valid ^{Note1} (Configuration state)	
Random	ON/Blink	Initializing (Initial state)	
Blank	OFF	Normal operation (Run state)	

Note1 : When the enter button is pressed for 1s, the Error LED starts flashing. The enter button should be released the Error LED is flashing so that configuration is valid. (The LED changes from flashing to solid ON when the enter button is pressed for more than 5s and then the set configuration is invalid.)

③ Timer LED

Indication	Status	Descriptions
"0"	ON	No OFF-delay (safety outputs shut-OFF immediately)
".1"	ON	OFF-delay timer 0.1s
".5"	ON	OFF-delay timer 0.5s
"1"	ON	OFF-delay timer 1s
"2"	ON	OFF-delay timer 2s
"5"	ON	OFF-delay timer 5s
"15"	ON	OFF-delay timer 15s
"30"	ON	OFF-delay timer 30s
Each LED	Blink	Selected timer value (Configuration state)
Random	ON/Blink	Initializing (Initial state)
Blank	OFF	Timer value is not selected or SafetyOne is in the Stop state

④ Input LED : SAFE-IN (X0 ... X15), START-IN (X16,X17)

	· ·	
Indication	Status	Descriptions
	ON	Input ON
X0X15	OFF	Input OFF, or SafetyOne is in the Stop state or Configuration state
	Blink	Input monitor error (Blink input number the error occurred, error number is displayed at Error LED)
V10 V17	ON	Input ON
X16, X17	OFF	Input OFF, or SafetyOne is in the Stop state or Configuration state
	Blink	Input monitor error (Blink input number the error occurred, error number is displayed at Error LED)

Indication specification of input LEDs are different depending on the selected logic

④ Output LED : SAFE-OUT (Y0 to Y3), SOLENOID-OUT(Y17,Y20)

	Indication	Status	Descriptions
Γ	Y0Y3	ON	Output ON
		OFF	Output OFF, or SafetyOne is in the Stop state or Configuration state
		Blink	During OFF-delay timer operation, or output monitor error (Blink output number the error occurred, error number is displayed in Error LED display)
	Y17, Y20	ON	Output ON
		OFF	Output OFF, or SafetyOne is in the Stop state or Configuration state

Specification of configuration switches

1) Logic switch

The logic switch is an 8-digit DIP switch for use in logic configuration. When one of "1" to "8" is selected, or one of "1" to "4" and one of "A", "b", "C", "d" are selected, the corresponding logic in SafetyOne is activated. See user's manual "Chapter 5 Logic" for further information on each logic. The upper position of each digit is the ON state. Other than above selections must not be done. 2 Timer switch

①Logic switch

2 Timer switch

③Enter button

The timer switch is an 8-digit DIP switch for use in OFF-delay timer value configuration. When one of 8 digits is selected, the delay time at shut-off operation is activated. The upper position of each digit is ON state

Multiple switches must not be selected.

Switch Indication Descriptions		Descriptions
0	1	No OFF-delay (safety outputs shut-OFF immediately)
.1	2	OFF-delay timer 0.1s
.5	3	OFF-delay timer 0.5s
1	4	OFF-delay timer 1s
2	5	OFF-delay timer 2s
5	6	OFF-delay timer 5s
15	7	OFF-delay timer 15s
30	8	OFF-delay timer 30s

③ Enter button

The enter button is used for activation of the configuration

At the configuration state, when all switches are set properly, pressing this button leads to activation of changed configurations. The configuration is not activated when the switches are not set properly even if the enter button is pressed. The enter button should be pressed for more than 1s and less than 5s. When pressing the button more than 1s and less than 5s, the error LED is flashing. (The LED changes from flashing to solid ON when the enter button is pressed for more than 5s then the change of state is invalid.)

type: -Spring clamp connector (30 poles)

-Crimp connector (30 poles)

[Tyco Electronics AMP type No. : 2-1871940-5]

[Tyco Electronics AMP type No. : 2-1871946-5]

For detailed information of the Crimp connector, consult

FS9Z-CN01 [IDEC]

Tyco Electronics AMP.)

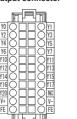

Note: Operate configuration switches with the attached configuration tool.

4 Installation and Wiring

Installation location

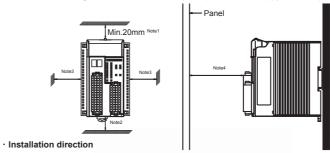

When SafetyOne in installed in an enclosure, confirm that installation enviroments meet the product specification. Using in enviroments such as described below, (over the product specifications) may cause electric shock, fire hazard, damage, or malfunction.

- SafetyOne should not be exposed to excessive dust, dirt, salt, vibration or shocks.
- Do not use SafetyOne in an area where corrosive chemicals or flammable gases are present. Do not use SafetyOne nearby induction heat source.

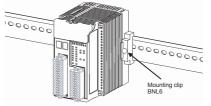

Mount SafetyOne with enough space from any devices as shown below for maintenance and ventilation. Do not install SafetyOne near, and especially above, any heating device or a heat source.

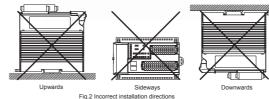

Use SafetyOne in surrounding air temperature, -10 to 55°C. Note1:Consider opening and closing of protective cover. (Min. 20mm)

Note2:Consider instllation to DIN rail and ventilation characteristic. (Approx. 20mm) Note3:Consider distance to other devices can be heat source, such as safety relays. (Approx. 40mm) Note4:Consider wiring the cables connected to input/output connectors. (Approx. 80mm

Mount SafetyOne on a vertical plane as shown in Fig.1. All other installation directions are not allowed.

 Installation to DIN rail Mount and remove SafetyOne on a 35mm-wide DIN rail according to the following instructions.

Applicable DIN rail : (for example) BAA1000 (IDEC)

Mounting on DIN rail

- 1. Fasten DIN rail to panel using screws 2. With the top of SafetyOne unit facing up, as shown in Fig.3, insert the groove, on the rear of the unit, and press the unit in direction of the arrow
- 3. Use BNL6 mounting clips (sold separately) on both sides of SafetyOne to prevent it from moving sideways

Removing from DIN rail 1. Insert a flat screwdriver into the slot in the clamp.

- 2. Pull the DIN rail hook until you hear a click, as shown in Fig.4.
- 3. Remove SafetvOne bottom out.

· Wiring method

SafetyOne has to two kinds of connectors "spring clamp" and "crimp". Wiring method for spring cramp connector is shown below. (For detailed information of Crimp connector, consult Tyco Electronics AMP.)

Mounting and removing the connector on SafetyOne

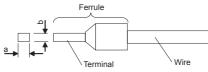

When mounting a connector to the SafetyOne, be sure to insert the connector straight and completely in until you hear a click or feel it click into position. To remove the connector, press down on the lock completly, and then pull out the connector. If pressing down on the lock is incomplete damage to the connector and wire may occur.

Applicable wire and ferrule sizes for spring clamp connector

AWG#18 - 24 (UL1007 recommended) Stripped length : 7.0±0.3mm

When using ferrules, specification are shown below

Long size : 1.02mm (min.) - 1.21mm (max.) ("a" in the figure below) Short size : 0.95mm (min.) - 1.21mm (max.) ("b" in the figure below) Applicable wire : AWG# 24 (UL1007 recon

· Wiring for spring clamp connector

Do not wire the connector while it is connected to the SafetyOne, as this can damage the connector and the SafetyOne

To connect the wire, use a connecting tool (FS9Z-SD01 [IDEC], 0-2040798-1 [Tyco Electronics AMP]) or a commercially-available screwdriver. It is recommended that you use a dedicated connecting tool to prevent any scratches or damage to the connector housing and spring. When rewiring, use wire with same gauge.

Wiring with a connecting tool

1. Insert the connecting tool into the tool insertion slot on the connecor at an angle until the tool comes to a stop.

2. Insert the wire into wire insertion slot. (If there are any loose strands, twist the wire to make it even.)

3. With the wire pressed down, remove the connecting tool to finish the wiring. Lightly tug on the wire to check that it is securely connected.

4. To remove the wire, press down the spring with connecting tool, as if you are connecting the wire, and pull out the wire

Wiring with a commercially-available screwdriver

Use a screwdriver with a tip width that does not exceed 2.4mm. Be careful when wiring with a screwdriver as this can damage the connector.

- 1. Insert the screwdriver into the tool insertion slot on the connector at an angle, and press down so as to pry open the spring. Be careful not to insert the screwdriver with too much force, as this can
- damage the connector. Do not insert the screwdriver into the wire insertion slot. 2. With the screwdriver inserted, as described in step 1 above, insert the wire into wire insertion slot (If there are any loose strands, twist the wire to make it even.)
- 3. With the wire pressed down, remove the screwdriver to finish the wiring. Lightly tug on the wire to check that it is securely connected.
- 4. To remove the wire, press down the spring with the screwdriver, as if you are connecting the wire, and pull out the wire.

5 Safety Perfomance

In the case of using safety outputs as dual channel outputs, SafetyOne can be used in a system for control category B to 4 and performance level a to e in accordance with EN ISO13849-1 (2008). In the case of using safety outputs as single channel outputs, SafetyOne can be used in a system for control category B to 3 and performance level a to d in accordance with EN ISO13849-1 (2008).

Average probability of failure on demand (PFD) and Probability of a dangerous failure per hour (PFH)

• In the case of using safety outputs as dual channel outputs The following table describes PFD and PFH in the case of dual channel outputs. They are needed for calculation of safety integrity level (SIL) which is applied to a system with SafetyOne. In this case SafetyOne can be used in a system for SIL 1 to 3 in accordance with IEC61508 (2010).

Proof test interval ^{Note1}	Average Probability of Failure on Demand (PFD)	Probability of a dangerous Failure per Hour (PFH)
6 months	< 2.1 x 10 ^₅	
1 year	< 3.6 x 10⁵	
2 years	< 6.7 x 10⁵	< 7.1 x 10 ^{.9}
5 years	< 1.6 x 10 ⁴ (SIL2)	
10 years	< 3.2 x 10 ⁻⁴ (SIL2)	

In the case of using safety outputs as single channel outputs

The following table describes PFD and PFH in the case of single channel outputs. They are needed for calculation of safety integrity level (SIL) which is applied to a system with SafetyOne. In this case

SaletyOne can be used in a system for SiL 1 to 2 in accordance with ECO1506 (2010).			
Proof test interval ^{Note1}	Average Probability of Failure on Demand (PFD)	Probability of a dangerous Failure per Hour (PFH)	
6 months	< 4.1 x 10 ^{.₅}		
1 year	< 7.5 x 10 ^{.₅}		
2 years	< 1.5 x 10⁴	< 1.6 x 10 ⁻⁸	
5 years	< 3.6 x 10 ⁻⁴		
10 years	< 7.0 x 10 ⁻⁴		

Note1 : Refer "APPENDIX Maintenance and inspection" in user's manual for proof test procedure.

Mean Time To dangerous Failure (MTTF_d) and Diagnostic Coverage (DC)

 \cdot In the case of using safety outputs as dual channel outputs

The following table describes MTTFd and DC in the case of dual channel outputs. They are needed for the calculation of Performance Level (PL) which is applied to a system with SafetyOne. In this case SafetyOne can be used in a system for PL a to e in accordance with EN ISO13849-1 (2008).

5	
Mean Time To dangerous Failure (MTTF _d)	Diagnostic Coverage (DC)
100 years	Hiah

In the case of using safety outputs as single channel outputs

The following table describes MTTFd and DC in the case of single channel outputs. They are needed for the calculation of Performance Level (PL) which is applied to a system with SafetyOne. In this case SafetyOne can be used in a system for PL a to d in accordance with EN ISO13849-1 (2008).

Mean Time To dangerous Failure (MTTF _d)	Diagnostic Coverage (DC)
100 years	Medium

6 Configuration and Operation

Refer the latest user's manual (FS9Z-B1572) for configuration, operation, and wiring, and use properly.
